

Rat Serum

Catalog Number	SRA
Sizes	100ml 500ml 1L
Sources	Normal, healthy rat
Appearance	Liquid
Exogenous Materials	No anticoagulant, coagulant or antibiotics were added in the production process.
Filtration	0.2µm
Total Protein	≥50mg/ml
pH	7.8±0.5
Hemoglobin	≤0.35 mg/ ml
Preservatives	None
Storage	≤-20℃
Stability	Stable for 5 years

Precautions

1. This product can be kept at 2-8℃ for maximum 30 days. Avoid repeated freezing and thawing. If multiple usages are needed, it is recommended to be stored separately in smaller volumes.
2. After taking the serum out of the freezer, it is first placed in a refrigerator at 2-8℃ to thaw it, and then at room temperature until it is fully melted. During the melting

process, the serum should be gently shaken frequently to melt evenly, however severe vibration should be avoided.

3. The number of serum freeze-thaw cycles should be reduced during use. The serum should not be placed at normal temperature or 2-8°C for prolonged time, as it will affect the serum quality.
4. If there is a flocculent precipitate after the serum is thawed, the serum can be centrifuged at a low speed and the supernatant can be used.
